

The Neutral Level of NGDP and the NGDP Gap: Q4 2020

David Beckworth

February 8, 2021

The nominal GDP (NGDP) gap is a measure of unexpected changes in the dollar size of the US economy. It is the percentage difference between the actual and the neutral level of NGDP, a sum of all dollar incomes expected by households and businesses coming into a specific time period. In the fourth quarter of 2020, the NGDP gap was -4.05 percent, down slightly from the -4.71 percent NGDP gap experienced in the third quarter of 2020 (see figures above).

The -4.05 percent NGDP gap implies that the dollar size of the economy was about \$910 billion smaller than expected at the end of 2020. Specifically, the neutral level of NGDP was \$22.39

trillion in the fourth quarter of 2020, while actual NGDP came in at \$21.48 trillion (see table). This shortfall of \$910 billion is a slight improvement over the \$1.05 trillion shortfall in the previous quarter. These shortfalls mean that both aggregate spending and income are still falling short of their pre-pandemic trend levels.

By way of comparison, the Congressional Budget Office (CBO) output gap reveals that the real economy was 2.85 percent smaller than its true potential in the fourth quarter in 2020. Also, relative to the previous quarter, actual NGDP grew by 1.46 percent (5.97 percent on annualized basis) over the same period. NGDP growth in the fourth quarter of 2020 was down from the record-breaking growth in the third quarter but still high by historical standards. Still, NGDP needs much additional growth to close the negative NGDP gap.

Measures of NGDP, Q3 2020 vs. Q4 2020		
MEASURE	Q3 2020	Q4 2020
Neutral level NGDP (trillions)	\$22.22	\$22.39
Actual level NGDP (trillions)	\$21.17	\$21.48
NGDP gap	-4.71%	-4.05%
CBO output gap	-3.48%	-2.85%
NGDP Q/Q (annualized)	8.45% (38.35%)	1.46% (5.97%)

A CLOSER LOOK AT THE NGDP GAP

As noted, the NGDP gap requires an estimate of the neutral level of NGDP. The neutral level of NGDP is estimated by taking an average forecast of NGDP, or equivalent total nominal income, for a given quarter based on forecasts for that period from the preceding 20 quarters. The forecast data used here are taken from the Federal Reserve Bank of Philadelphia's Survey of Professional Forecasters.

The NDGP gap measures the percentage difference between this average forecast and the actual level of NGDP. If the actual level of NGDP is less than the neutral level, then monetary conditions are contractionary. If actual NGDP is greater than the neutral level, then monetary conditions are expansionary.

The rationale for this understanding is twofold. First, members of the public make many economic decisions, such as whether to take out a mortgage or a car loan, on the basis of forecasts of their nominal income. Similarly, firms may finance with debt and commit to multiyear contracts on plants, raw materials, and labor on the basis of forecasts of their nominal income. Second, actual nominal incomes may turn out to be very different from what are expected and, as a result, may be disruptive for households and firms that are not able to quickly adjust their economic plans. These disruptions can be avoided by maintaining total nominal income or NGDP on the growth path expected by the public. In other words, the Federal Reserve should aim to close the NGDP gap in order to keep monetary conditions neutral.

For more information on how the NGDP gap is constructed and how it may be used to understand policy, please see “The Stance of Monetary Policy: The NGDP Gap,”¹ a policy brief by David Beckworth. Also, see the NGDP gap web page hosted by the Mercatus Center that provides access to current and vintage data on the NGDP gap.²

ABOUT THE AUTHOR

David Beckworth is the director of the Program on Monetary Policy at the Mercatus Center at George Mason University and a former international economist at the US Department of the Treasury. His research focuses on monetary policy, and his work has been cited by the *Wall Street Journal*, the *Financial Times*, the *New York Times*, *Bloomberg Businessweek*, and the *Economist*. He has advised congressional staffers on monetary policy and has written for *Barron's*, *Investor's Business Daily*, the *New Republic*, the *Atlantic*, and *National Review*.
