

A Snapshot of Georgia Regulation in 2019

109,112 Restrictions, 6.0 Million Words, and 8 Weeks to Read

James Broughel

Data Analysis by Jonathan Nelson

July 2019

It would take an ordinary person almost three years to read the entire US *Code of Federal Regulations* (CFR), which contained nearly 104 million words in 2017.¹ The sheer size of the CFR poses a problem not just for the individuals and businesses that want to stay in compliance with the law but also for anyone interested in understanding the consequences of this massive system of rules. States also have sizable regulatory codes, which add an additional layer to the large body of federal regulation. A prime example is the online version of the 2019 *Rules and Regulations of the State of Georgia* (RRSG).²

Researchers at the Mercatus Center at George Mason University developed State RegData, a platform for analyzing and quantifying state regulatory text.³ State RegData captures information in minutes that would take hours, weeks, or even years to obtain by reading and counting. For example, the tool allows researchers to identify the industries that state regulation targets most by connecting text relevant to those industries with restrictive word counts. These regulatory restrictions are instances of the words and phrases *shall*, *must*, *may not*, *prohibited*, and *required*, and they can signify legal constraints and obligations.⁴ As shown in figure 1, the three industries with the highest estimates of industry-relevant restrictions in the 2019 RRSG are administrative and support services; professional, scientific, and technical services (which includes legal services, accounting and tax preparation, and a variety of other professional services); and waste management and remediation services.

Figure 1. Top 10 Industries Targeted by Georgia State Regulation in 2019

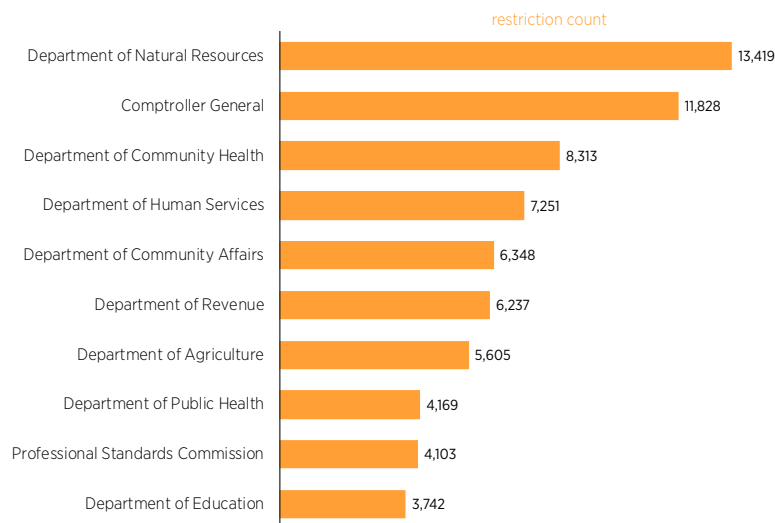

Note: Industries are classified using the RegData 3.0 industry classifier. Some previous state regulatory snapshots used earlier versions of the RegData industry classifier.

State RegData also reveals that the 2019 RRSg contains 109,112 restrictions and 6.0 million words. It would take an individual 334 hours—or more than 8 weeks—to read the entire RRSg. That’s assuming the reader spends 40 hours per week reading and reads at a rate of 300 words per minute. By comparison, there are 1.09 million additional restrictions in the federal code.⁵ Individuals and businesses in Georgia must navigate these different layers of restrictions to remain in compliance.

Figure 2. Top 10 Regulators in Georgia in 2019

Source: State RegData (Georgia data), <https://quantgov.org/state-regdata/>.

The titles of the RRSG are organized by the department or commission that oversees particular rules. Figure 2 shows that the section of the code associated with the Department of Natural Resources contains 13,419 restrictions. By this measure, this is the biggest regulator in Georgia. Coming in second is the Comptroller General with 11,828 restrictions.

Federal regulation tends to attract the most headlines, but it is important to remember that the nearly 104 million words and 1.09 million restrictions in the federal code significantly understate the true scope of regulation in the United States. States like Georgia write millions of additional words of regulation and hundreds of thousands of additional restrictions. State-level requirements carry the force of law to restrict individuals and businesses just as federal ones do.

Researchers are only beginning to understand the consequences of the massive and growing federal regulatory system on economic growth and well-being in the United States.⁶ Meanwhile, the effects of state regulation remain largely unknown. If this snapshot of Georgia regulation in 2019 is a good indicator, then the states are also active regulators, suggesting that the full impact of regulation on society is far greater than that of federal regulation alone.

ACKNOWLEDGMENT

The author would like to thank Michael Kotrous for helpful research and programming assistance that contributed to this report.

ABOUT THE AUTHOR

James Broughel is a senior research fellow at the Mercatus Center at George Mason University. Broughel has a PhD in economics from George Mason University. He is also an adjunct professor in the economics department and the law school at George Mason University.

QuantGov

This regulatory snapshot was produced in part using **QuantGov**, a policy analytics platform that facilitates analysis of the causes and effects of various government actions. The QuantGov project treats policy text as data, allowing researchers to quickly and effectively examine broad policies (as articulated in bodies of text) by using some of the latest advances from data science, such as machine learning and other artificial intelligence technology. The Mercatus Center's team of data engineers, analysts, and developers created this platform and continually utilize and update it to produce data that support a variety of research products and to provide policymakers with data that inform positive policy change. More information is available at quantgov.org.
