A Snapshot of Washington State Regulation in 2019
196,028 Restrictions, 17.3 Million Words, and 24 Weeks to Read

James Broughel
April 2019

It would take an ordinary person more than two and a half years to read the entire US Code of Federal Regulations (CFR), which contained nearly 104 million words in 2017.1 The sheer size of the CFR poses a problem not just for the individuals and businesses that want to stay in compliance with the law but also for anyone interested in understanding the consequences of this massive system of rules. States also have sizable regulatory codes, which add an additional layer to the large body of federal regulation. A prime example is the online version of the 2019 Washington Administrative Code (WAC).2

Researchers at the Mercatus Center at George Mason University developed State RegData, a platform for analyzing and quantifying state regulatory text.3 State RegData captures information in minutes that would take hours, weeks, or even years to obtain by reading and counting. For example, the tool allows researchers to identify the industries that state regulation targets most by connecting text relevant to those industries with restrictive word counts. These regulatory restrictions are instances of the words and phrases shall, must, may not, prohibited, and required, and they can signify legal constraints and obligations.4 As shown in figure 1, the three industries with the highest estimates of industry-relevant restrictions in the 2019 WAC are professional, scientific, and technical services (which includes legal services, accounting and tax preparation, and a variety of other professional services); animal production and aquaculture; and administrative and support services.

State RegData also reveals that the 2019 WAC contains 196,028 restrictions and 17.3 million words. It would take an individual about 961 hours—or more than 24 weeks—to read the entire WAC.

The views presented in this document do not represent official positions of the Mercatus Center or George Mason University.
That’s assuming the reader spends 40 hours per week reading and reads at a rate of 300 words per minute. By comparison, there are 1.09 million additional restrictions in the federal code. Individuals and businesses in Washington State must navigate these different layers of restrictions to remain in compliance.

The titles in the WAC are organized by the department, commission, board, or other entity that oversees particular rules. Figure 2 shows that title 296 of the WAC, associated with the Department of Labor and Industries, contains 43,579 restrictions. By this measure, this is the biggest title in the WAC. Coming in second is title 246, associated with the Department of Health, with 20,483 restrictions.

Federal regulation tends to attract the most headlines, but it is important to remember that the nearly 104 million words and 1.09 million restrictions in the federal code significantly understate the true scope of regulation in the United States. States like Washington write millions of additional words of regulation and hundreds of thousands of additional restrictions. State-level requirements carry the force of law to restrict individuals and businesses just as federal ones do.

Researchers are only beginning to understand the consequences of the massive and growing federal regulatory system on economic growth and well-being in the United States. Meanwhile, the effects of state regulation remain largely unknown. If this snapshot of Washington regulation in 2019 is a good indicator, then the states are also active regulators, suggesting that the full impact of regulation on society is far greater than that of federal regulation alone.
ACKNOWLEDGMENT
The author would like to thank Michael Kotrous for helpful research and programming assistance that contributed to this report.

ABOUT THE AUTHOR
James Broughel is a senior research fellow at the Mercatus Center at George Mason University. Broughel has a PhD in economics from George Mason University. He is also an adjunct professor in the economics department and the law school at George Mason University.

This regulatory snapshot was produced in part using QuantGov, a policy analytics platform that facilitates analysis of the causes and effects of various government actions. The QuantGov project treats policy text as data, allowing researchers to quickly and effectively examine broad policies (as articulated in bodies of text) by using some of the latest advances from data science, such as machine learning and other artificial intelligence technology. The Mercatus Center’s team of data engineers, analysts, and developers created this platform and continually utilize and update it to produce data that support a variety of research products and to provide policymakers with data that inform positive policy change. NOTES

1. This assumes the person reads 300 words per minute for 40 hours per week with two weeks of vacation per year. See Patrick A. McLaughlin and Oliver Sherouse, RegData US 3.1 Annual (dataset), QuantGov, Mercatus Center at George Mason University, Arlington, VA, https://quantgov.org/state-regdata/; Patrick A. McLaughlin, Oliver Sherouse, Daniel Francis, Michael Gasvoda, Jonathan Nelson, Stephen Strosko, and Tyler Richards, “RegData 3.0 User’s Guide,” accessed February 15, 2018, https://quantgov.org/regdata/users-guide/.

4. Restrictions can also occur in legal text for other purposes, such as for definitional purposes. At times, restrictions may relate to government employees rather than the private sector.
