A Snapshot of Texas Regulation in 2018
226,898 Restrictions, 14.9 Million Words, and 21 Weeks to Read

by James Broughel and Jonathan Nelson
March 2018

It would take an ordinary person more than two and a half years to read the entire US Code of Federal Regulations (CFR), which contained more than 104 million words in 2016.¹ The sheer size of the CFR poses a problem not just for the individuals and businesses that want to stay in compliance with the law but also for anyone interested in understanding the consequences of this massive system of rules. States also have sizable regulatory codes, which add an additional layer to the large body of federal regulation. A prime example is the online version of the 2018 Texas Administrative Code (TAC).²

Researchers at the Mercatus Center at George Mason University developed State RegData,³ a platform for analyzing and quantifying state regulatory text. State RegData captures information in minutes that would take an ordinary person hours, weeks, or even years to obtain. For example, the tool allows researchers to identify the industries that state regulation targets most by connecting text relevant to those industries with restrictive word counts. Known as regulatory restrictions, the words and phrases shall, must, may not, prohibited, and required can signify legal constraints and obligations.⁴ As shown in figure 1, the three industries with the highest estimates of industry-relevant restrictions in the 2018 TAC are chemical manufacturing, food manufacturing, and animal production and aquaculture.

---

1. This assumes the person reads 300 words per minute for 40 hours per week with two weeks of vacation per year.

4. Restrictions can also occur in legal text for other purposes, such as for definitional purposes. At times, restrictions may relate to government employees rather than the private sector.
State RegData also reveals that the TAC contains 226,898 restrictions and 14.9 million words. It would take an individual about 829 hours—or almost 21 weeks—to read the entire TAC. That’s assuming the reader spends 40 hours per week reading and reads at a rate of 300 words per minute. By comparison, there are more than 1.08 million additional restrictions in the federal code. Individuals and businesses in Texas must navigate these different layers of restrictions to remain in compliance.

The titles of the TAC are organized based on the type of regulation they contain. Figure 2 shows that the title of the TAC associated with economic regulation contains more than 33,600 restrictions. By this measure, this is the biggest title in the TAC. Coming in second is the title related to environmental quality, with more than 33,500 restrictions.

Federal regulation tends to attract the most headlines, but it is important to remember that the more than 104 million words and 1.08 million restrictions in the federal code significantly understate the true scope of regulation in the United States. States like Texas write millions of additional words of regulation and hundreds of thousands of additional restrictions. State-level requirements carry the force of law to restrict individuals and businesses just as federal ones do.

Researchers are only beginning to understand the consequences of the massive and growing federal regulatory system on economic growth and well-being in the United States. Meanwhile, the effects of state regulation remain largely unknown. If this snapshot of Texas regulation in 2018 is a good indicator, then the states are also active regulators, suggesting that the full impact of regulation on society is far greater than that of federal regulation alone.

ABOUT THE AUTHORS

James Broughel is a research fellow for the State and Local Policy Project at the Mercatus Center at George Mason University. Broughel has a PhD in economics from George Mason University. He is also an adjunct professor of law at the Antonin Scalia Law School.

Jonathan Nelson is a program associate for the Program for Economic Research on Regulation at the Mercatus Center at George Mason University. He received his BA in economics from Grove City College.

ABOUT THE MERCATUS CENTER

The Mercatus Center at George Mason University is the world’s premier university source for market-oriented ideas—bridging the gap between academic ideas and real-world problems.

A university-based research center, Mercatus advances knowledge about how markets work to improve people’s lives by training graduate students, conducting research, and applying economics to offer solutions to society’s most pressing problems.

Our mission is to generate knowledge and understanding of the institutions that affect the freedom to prosper and to find sustainable solutions that overcome the barriers preventing individuals from living free, prosperous, and peaceful lives.

Founded in 1980, the Mercatus Center is located on George Mason University’s Arlington and Fairfax campuses. www.mercatus.org
