# VIRGINIA

## SUMMARY

On the basis of its fiscal solvency in five separate categories, Virginia ranks 19th among the US states and Puerto Rico for its fiscal health. On a cash basis, Virginia has between 1.63 and 2.40 times the cash needed to cover short-term liabilities. Revenues exceed expenses by 3 percent, for a surplus of \$151 per capita. Virginia's net asset ratio of  $-0.005$  indicates that the state has no assets remaining after meeting its debts. Total liabilities are 30 percent of total assets. Total debt is \$6.86 billion. Unfunded pension liabilities are \$87.66 billion, and other postemployment benefits (OPEB) are \$5.19 billion. These three liabilities are equal to 24 percent of total state personal income.

## KEY TERMS

- **Cash solvency** measures whether a state has enough cash to cover its short-term bills, which include accounts payable, vouchers, warrants, and short-term debt. (Virginia ranks 28th.)
- **Budget solvency** measures whether a state can cover its fiscal year spending using current revenues. Did it run a shortfall during the year? (Virginia ranks 28th.)
- **Long-run solvency** measures whether a state has a hedge against large long-term liabilities. Are enough assets available to cushion the state from potential shocks or long-term fiscal risks? (Virginia ranks 26th.)
- **Service-level solvency** measures how high taxes, revenues, and spending are when compared to state personal income. Do states have enough “fiscal slack”? If spending commitments demand more revenues, are states in a good position to increase taxes without harming the economy? Is spending high or low relative to the tax base? (Virginia ranks 5th.)
- **Trust fund solvency** measures how much debt a state has. How large are unfunded pension liabilities, OPEB liabilities, and state debt compared to the state personal income? (Virginia ranks 14th.)
