1. Cut off excess paper so you're left with a shape that fits across the outside of your pumpkin. Tape the design to the flattest side of your pumpkin.

2. Using a toothpick or similar object, poke along the edge of the design to transfer the image onto your pumpkin. The more pokes you do, the easier it will be to carve.

3. Once you've finished transferring the design, remove the paper and keep it for reference. Cut along the poked holes, starting with the smaller detailed areas then the larger parts.
