NEVADA

SUMMARY

On the basis of its fiscal solvency in five separate categories, Nevada is ranked 14th among the US states for its fiscal health. On a short-run basis, Nevada has between 1.98 and 3.39 times the cash needed to cover short-term obligations. Revenues exceed expenses by 6 percent, and net position improved by \$204 per capita in FY 2015. On a long-run basis, Nevada's net asset ratio is -0.04. Long-term liabilities are 47 percent of total assets, or \$1,967 per capita. Total primary government debt is \$3.51 billion, or 2.9 percent of state personal income, lower than the average in the states. Nevada's trust fund solvency is ranked among the lowest in the country. Unfunded pension obligations, on a guaranteed-to-be-paid basis, are \$65.87 billion, or 54 percent of state personal income. OPEB is 1 percent of state personal income.

KEY TERMS

- **Cash solvency** measures whether a state has enough cash to cover its short-term bills, which include accounts payable, vouchers, warrants, and short-term debt. (Nevada ranks 19th.)
- **Budget solvency** measures whether a state can cover its fiscal year spending using current revenues. Did it run a shortfall during the year? (Nevada ranks 17th.)
- **Long-run solvency** measures whether a state has a hedge against large long-term liabilities. Are enough assets available to cushion the state from potential shocks or long-term fiscal risks? (Nevada ranks 25th.)
- **Service-level solvency** measures how high taxes, revenues, and spending are when compared to state personal income. Do states have enough “fiscal slack”? If spending commitments demand more revenues, are states in a good position to increase taxes without harming the economy? Is spending high or low relative to the tax base? (Nevada ranks 2nd.)
- **Trust fund solvency** measures how much debt a state has. How large are unfunded pension liabilities and OPEB liabilities compared to the state personal income? (Nevada ranks 45th.)
