OKLAHOMA

SUMMARY

On the basis of its fiscal solvency in five separate categories, Oklahoma is ranked 7th among the US states for its fiscal health. On a short-run basis, Oklahoma has between 3.14 and 3.83 times the cash needed to cover short-term obligations. Revenues exceed expenses by 7 percent, and net position improved by \$338 per capita in FY 2015. On a long-run basis, net assets are 36 percent of total assets after debts have been paid. Long-term liabilities are 10 percent of total assets, or \$610 per capita. Total primary government debt is \$2.22 billion, or 1.3 percent of state personal income. Oklahoma's trust fund solvency is the strongest among the states. Unfunded pension obligations, on a guaranteed-to-be-paid basis, are \$48.99 billion, or 28 percent of state personal income.

KEY TERMS

- **Cash solvency** measures whether a state has enough cash to cover its short-term bills, which include accounts payable, vouchers, warrants, and short-term debt. (Oklahoma ranks 15th.)
- **Budget solvency** measures whether a state can cover its fiscal year spending using current revenues. Did it run a shortfall during the year? (Oklahoma ranks 9th.)
- **Long-run solvency** measures whether a state has a hedge against large long-term liabilities. Are enough assets available to cushion the state from potential shocks or long-term fiscal risks? (Oklahoma ranks 2nd.)
- **Service-level solvency** measures how high taxes, revenues, and spending are when compared to state personal income. Do states have enough “fiscal slack”? If spending commitments demand more revenues, are states in a good position to increase taxes without harming the economy? Is spending high or low relative to the tax base? (Oklahoma ranks 13th.)
- **Trust fund solvency** measures how much debt a state has. How large are unfunded pension liabilities and OPEB liabilities compared to the state personal income? (Oklahoma ranks 1st.)
